

We are looking for a highly motivated Full Stack Developer to join our Global AI & Advanced Analytics team.

Responsibilities:

- Design and implement microservice architectures for new and existing software programs.
- Deploy software using containerization technologies
- Develop Frontend applications
- Conduct code reviews and ensure the quality of the developed solutions
- Team up with Data Scientists and Data Engineers to productionize developed solutions
- Be a mentor in Software Engineering topics for junior colleagues.
- Provide access to structured and non-structured data coming from different sources.
- Design and prepare ETLs and tooling for processing data, doing advanced analytics and applying machine learning models.

Your Profile:

- Bachelor's Degree in computer science or equivalent professional experience.
- Deep Knowledge on Object Oriented Programming and developing with Java applications.
- Experience with REST APIs and Web Services.
- Solid hands on working with Spring Framework (Security, MVC, Spring Data, Spring Boot and Spring Cloud).
- Experience designing and building Microservices architectures.
- Experience with Docker
- Comfortable using SQL or NoSQL databases.
- Fluent in English language.

Preferred Qualifications:

- Frontend development experience with Angular
- Python programming skills
- Experience with Cloud infrastructure (MS Azure or AWS)
- Experience in Analytics, reporting and Data Visualization

Experience

2-4 Years of Working Experience

Location

Pune/Bangalore
