Press Release

DEKRA at E-world 2025 in Essen

Focus on Safe Transformation

Renewable energy plays a pivotal role in industry, energy supply, and mobility. As an innovative testing organization, DEKRA ensures the maximum possible safety of new technologies, systems, and infrastructure. DEKRA will be showcasing solutions for the safe transformation of the energy sector at E-world, the leading trade fair for the energy industry taking place in Essen, Germany, from February 11 to 13, 2025.

There is no alternative to switching to climate-friendly energy sources for the future. Already today, there are many alternatives to fossil-based energy technologies, with biogas (CNG/LNG), synthetic fuels (e-fuels), battery electric solutions, and climate-neutral hydrogen technologies on the rise. To foster their acceptance by society, the safety of systems and infrastructure must be ensured alongside performance, cost-effectiveness, and feasibility.

As Germany's largest testing organization and innovator, DEKRA offers testing and certification solutions spanning the entire energy value chain: from climate-friendly power generation, transportation and storage through to use.

DEKRA offers energy producers testing services for onshore and offshore wind power plants and for photovoltaic and biogas facilities, for example. When it comes to e-mobility, DEKRA has an end-to-end portfolio of expert services for systems, vehicles, and batteries, including expert opinions, inspections, conformity assessments, and certification for all process steps.

DEKRA's stand at E-world will focus particularly on hydrogen technologies and climate-neutral hydrogen derivatives, especially electrolyzers, pipeline and road transport, and tank farms. DEKRA supports the developers, manufacturers, operators, and users of hydrogen with services in the areas of process, plant, and environmental safety in accordance with the customary standards and testing regulations.

About DEKRA

DEKRA was originally founded in 1925 to ensure road safety through vehicle inspection. With a much wider scope today, DEKRA is the world's largest independent non-listed expert organization in the testing, inspection, and certification sector. As a global provider of comprehensive services and solutions, we help our customers improve their safety, security, and sustainability outcomes. In 2023, DEKRA generated revenue of EUR 4.1 billion. The company currently employs around 49,000 people who offer qualified and independent expert services in approximately 60 countries on five continents. With a platinum rating from EcoVadis, DEKRA is now ranked in the top one percent of sustainable businesses.
