

As solar energy becomes a global energy source, collaboration across the supply chain is essential. DEKRA, a trusted name in the industry, works with solar energy companies around the world to ensure safety, reliability and compliance. From rooftop installations to industrial applications, our experts can help you meet the demands of the growing solar sector with tailored solutions for a sustainable future.

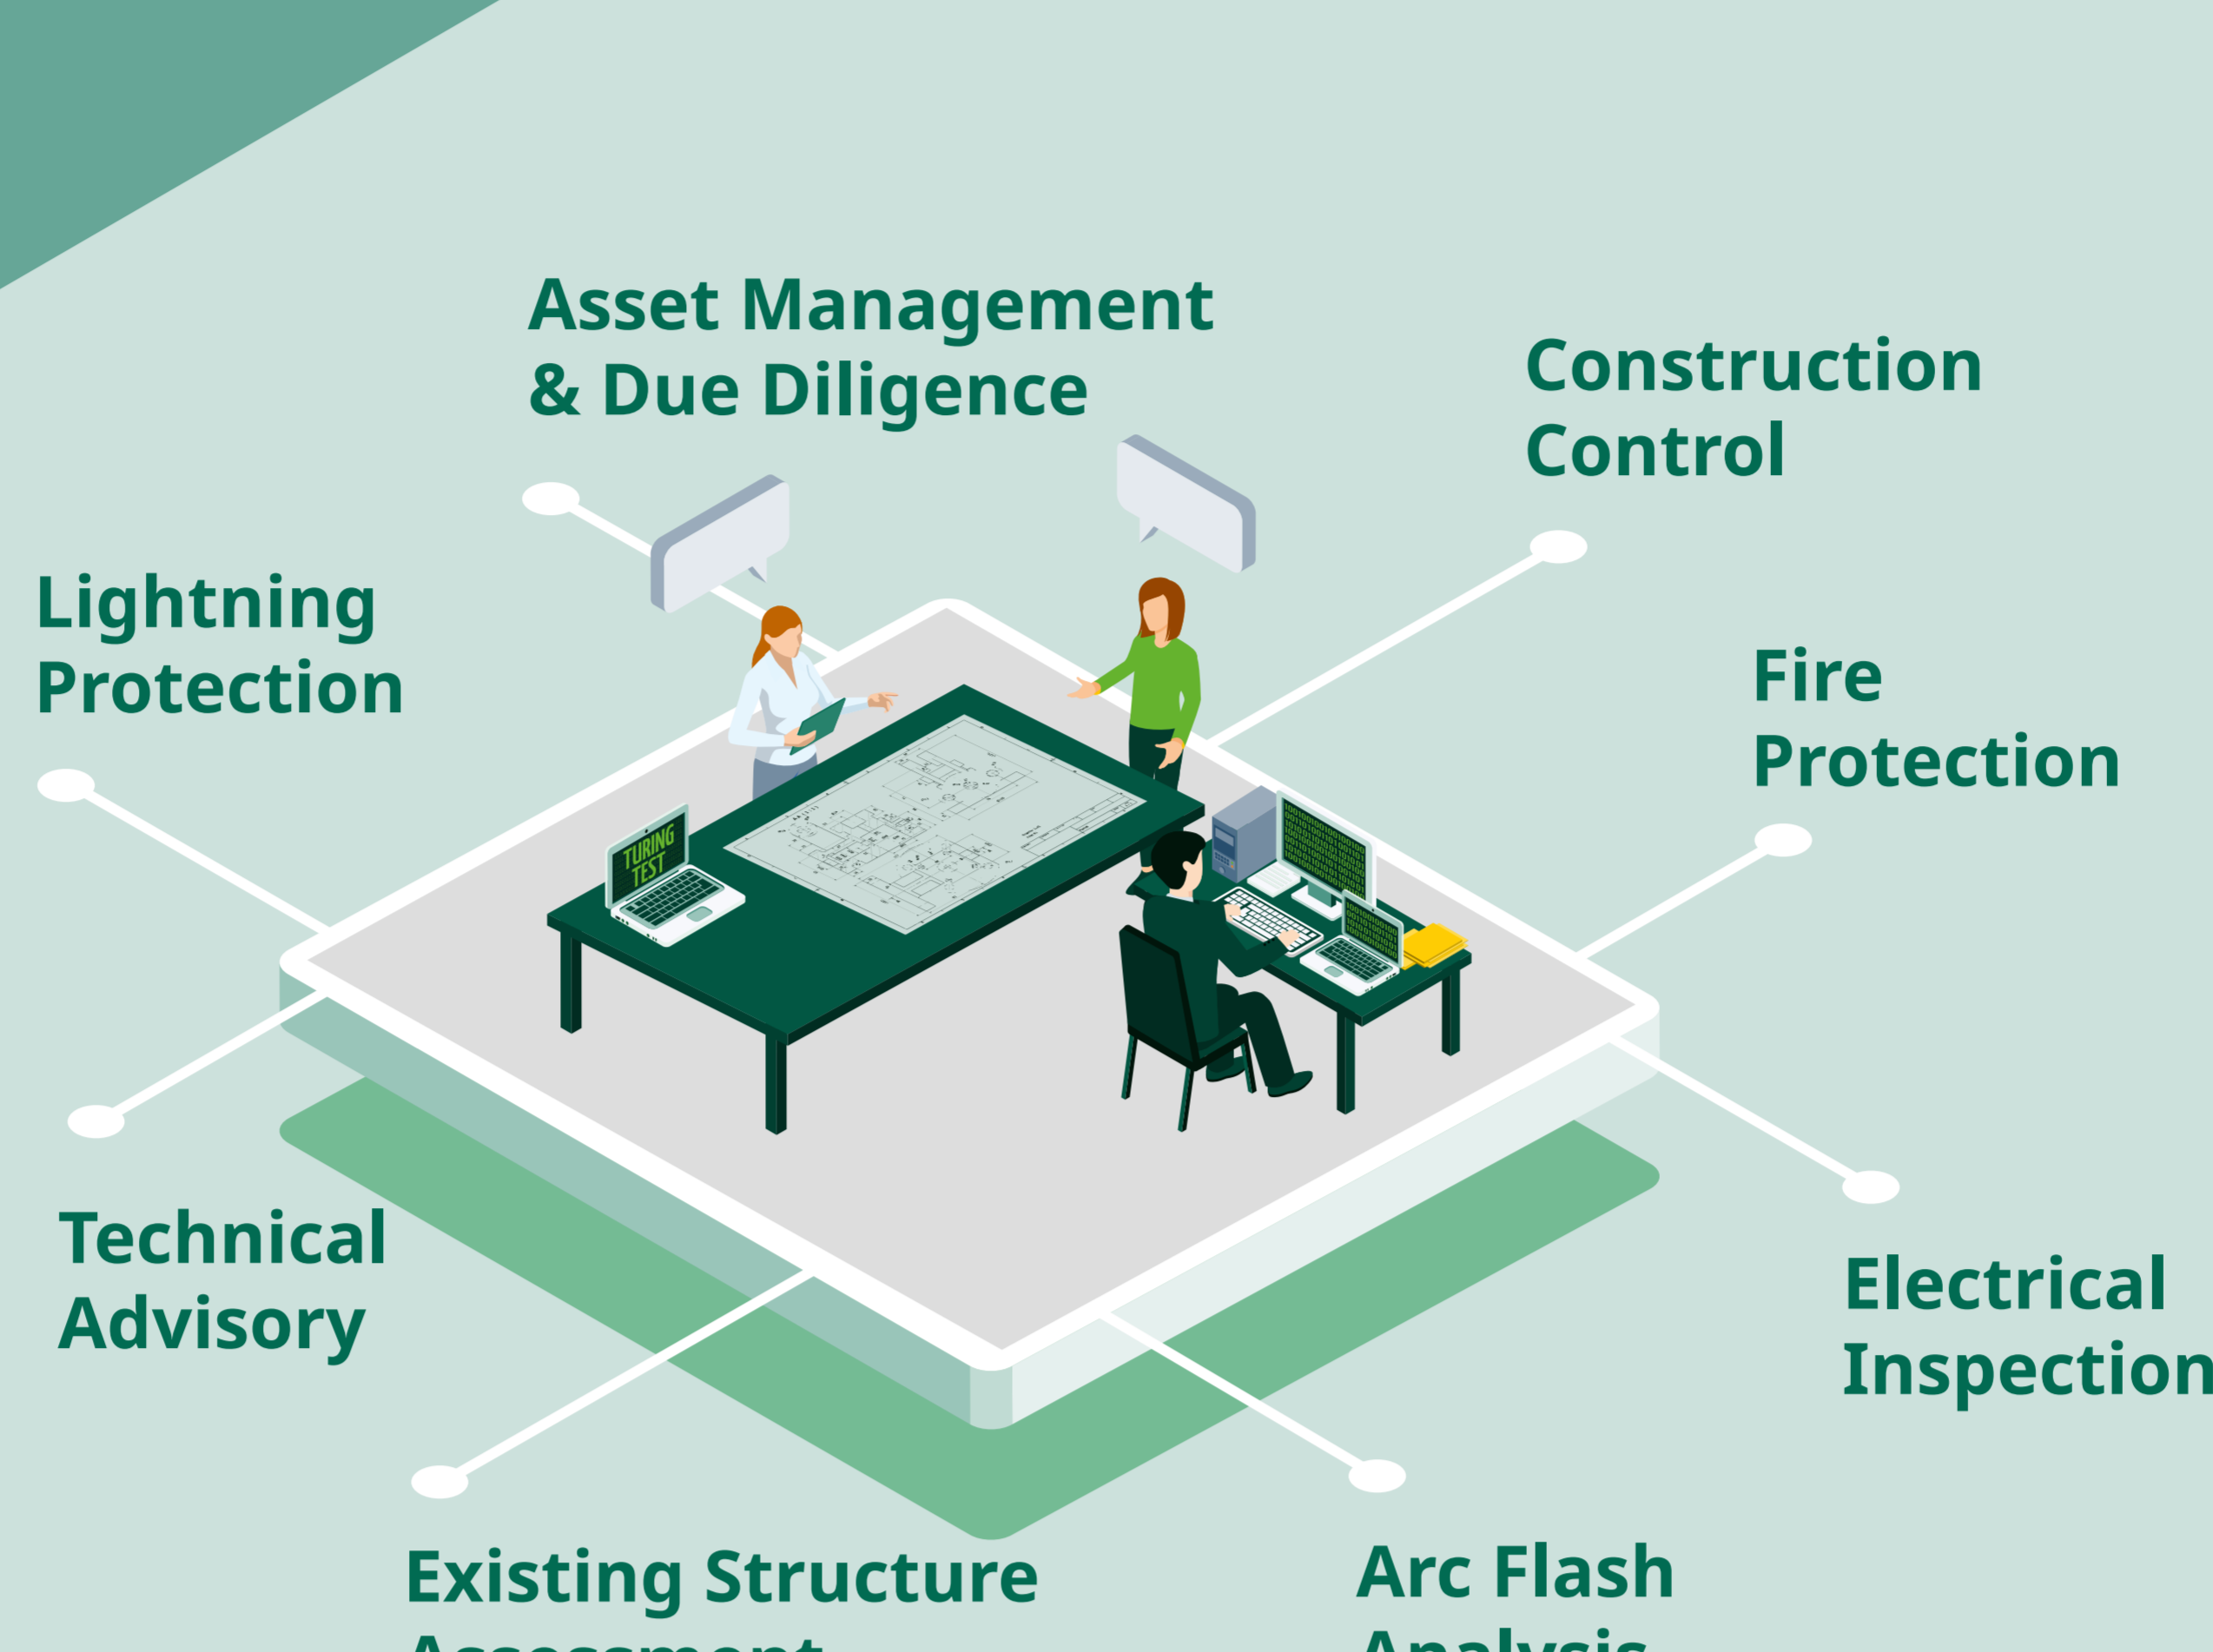

## 1 Feasibility

Identifying optimal locations for solar installations to maximize energy output and efficiency.

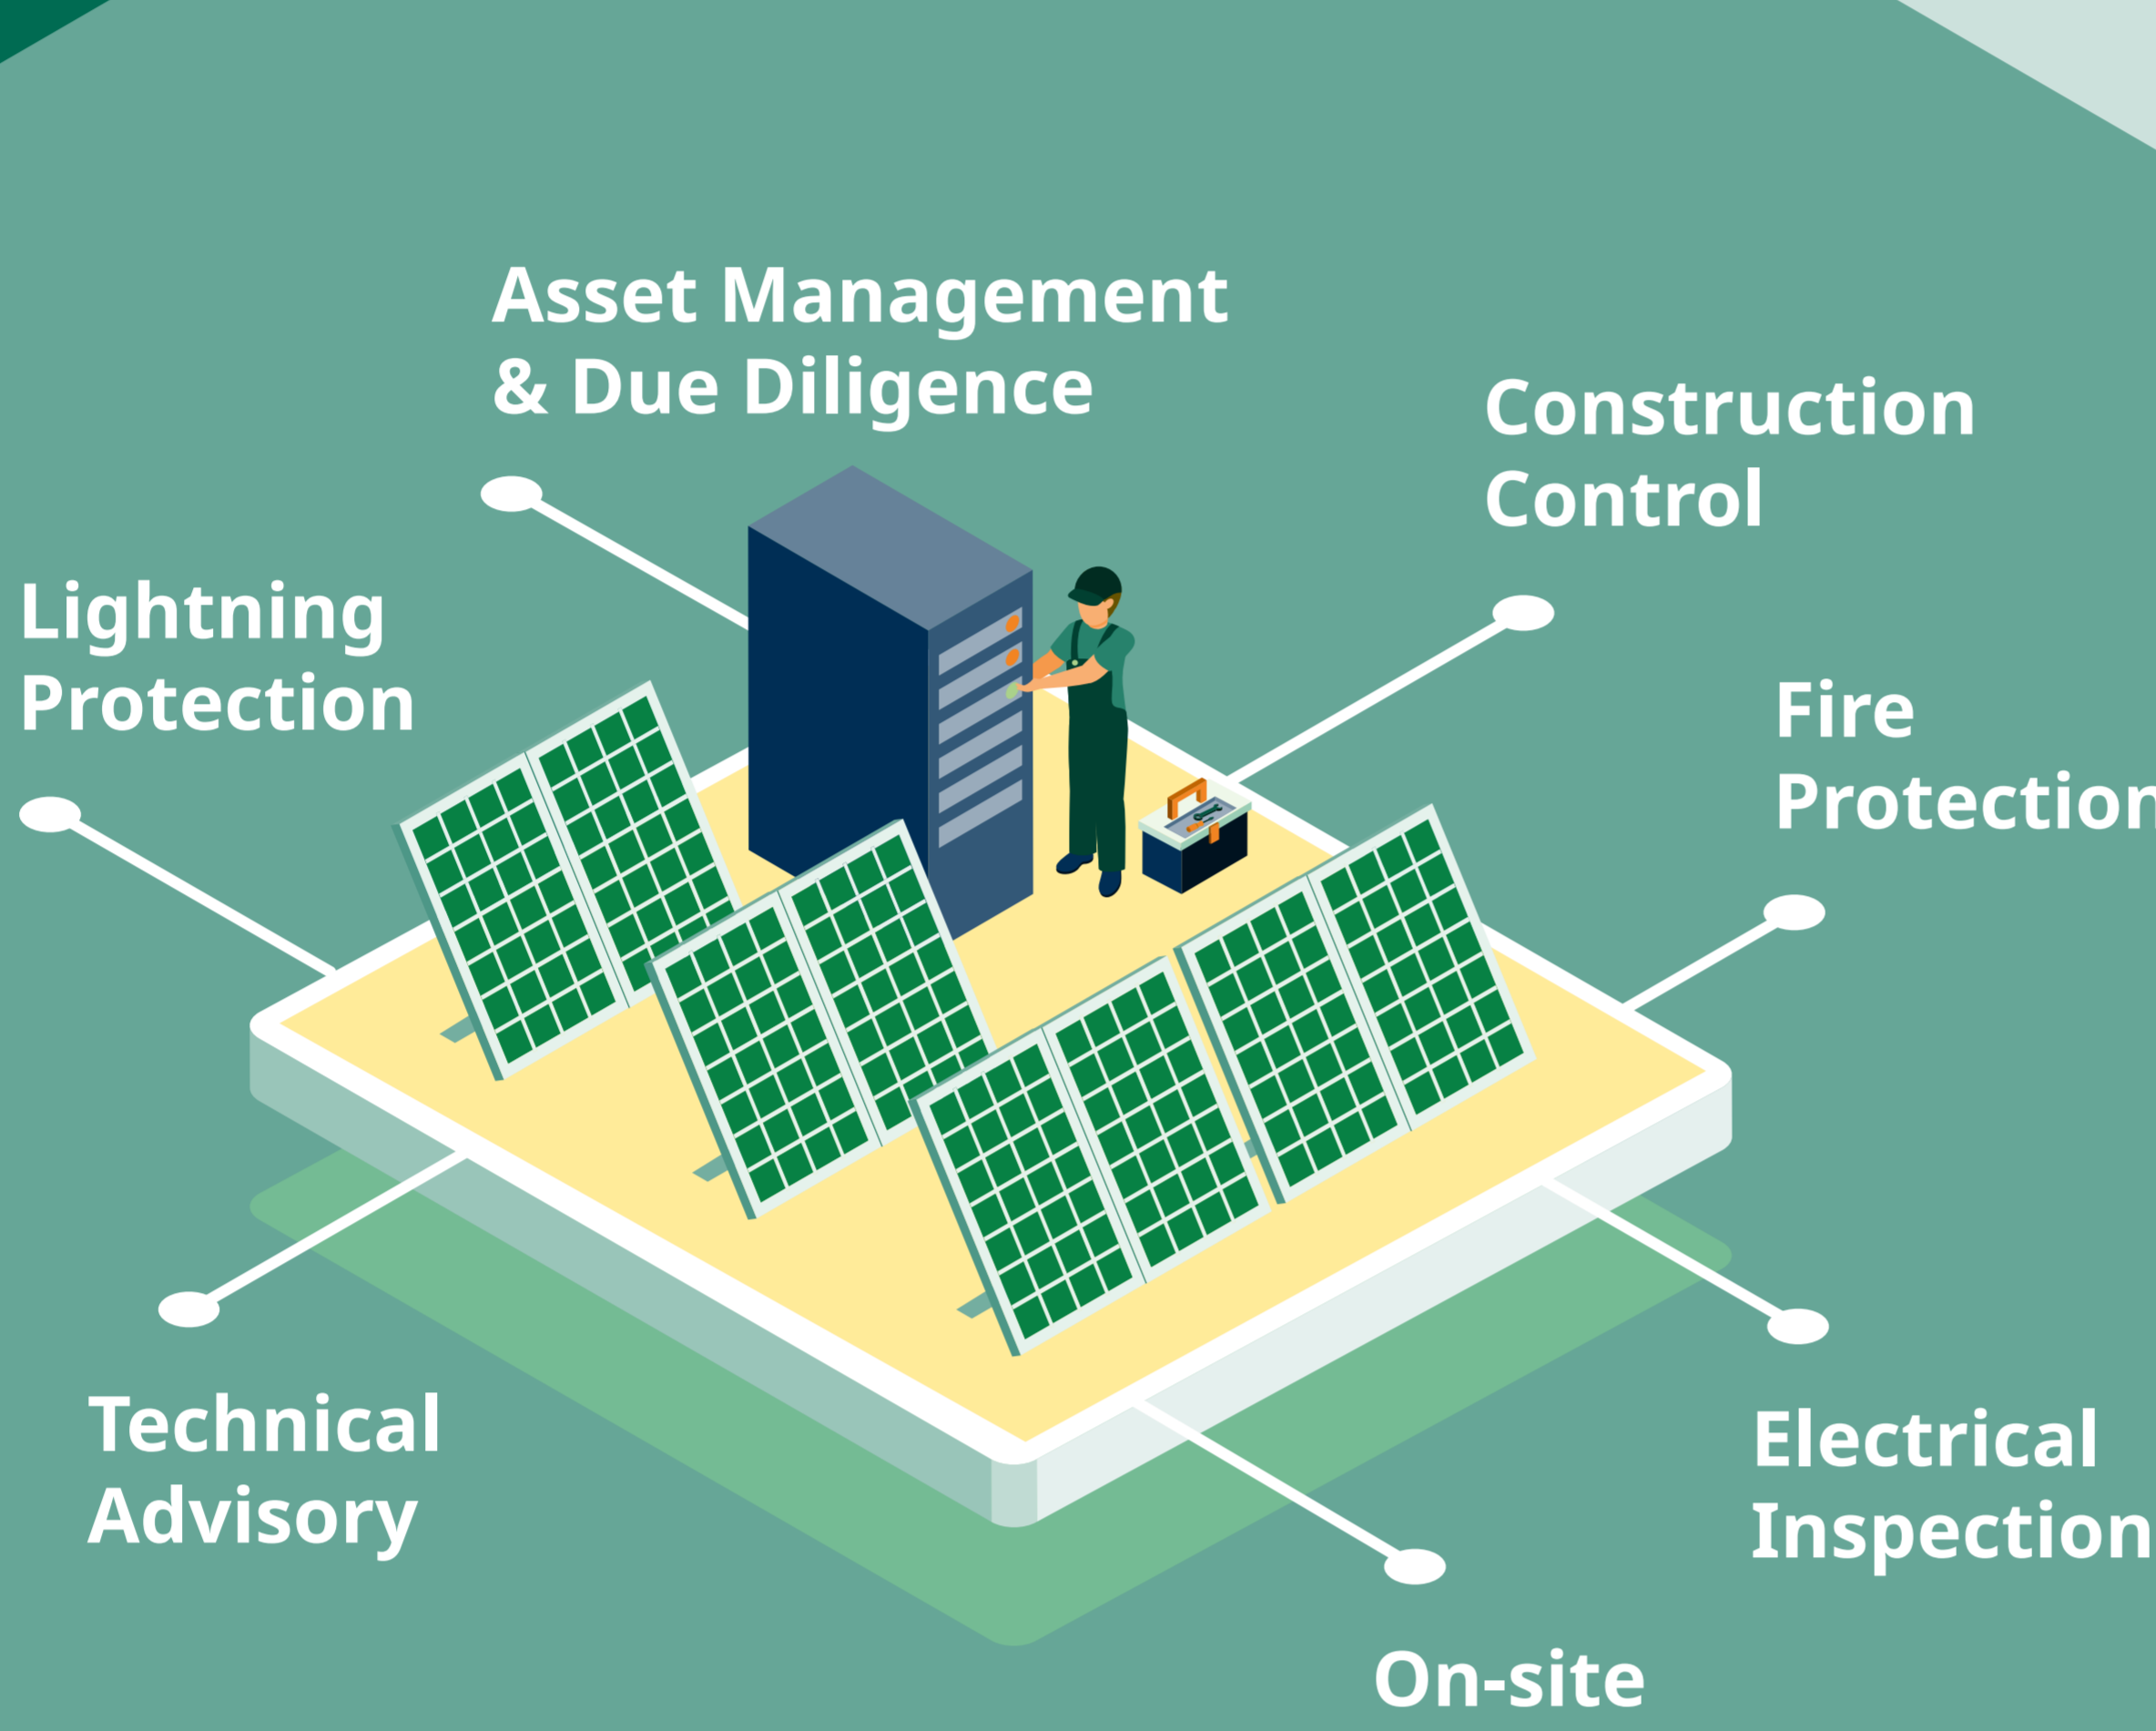

## 2 Design

Effective design maximizes solar energy output by optimizing placement, orientation, and structural integrity.

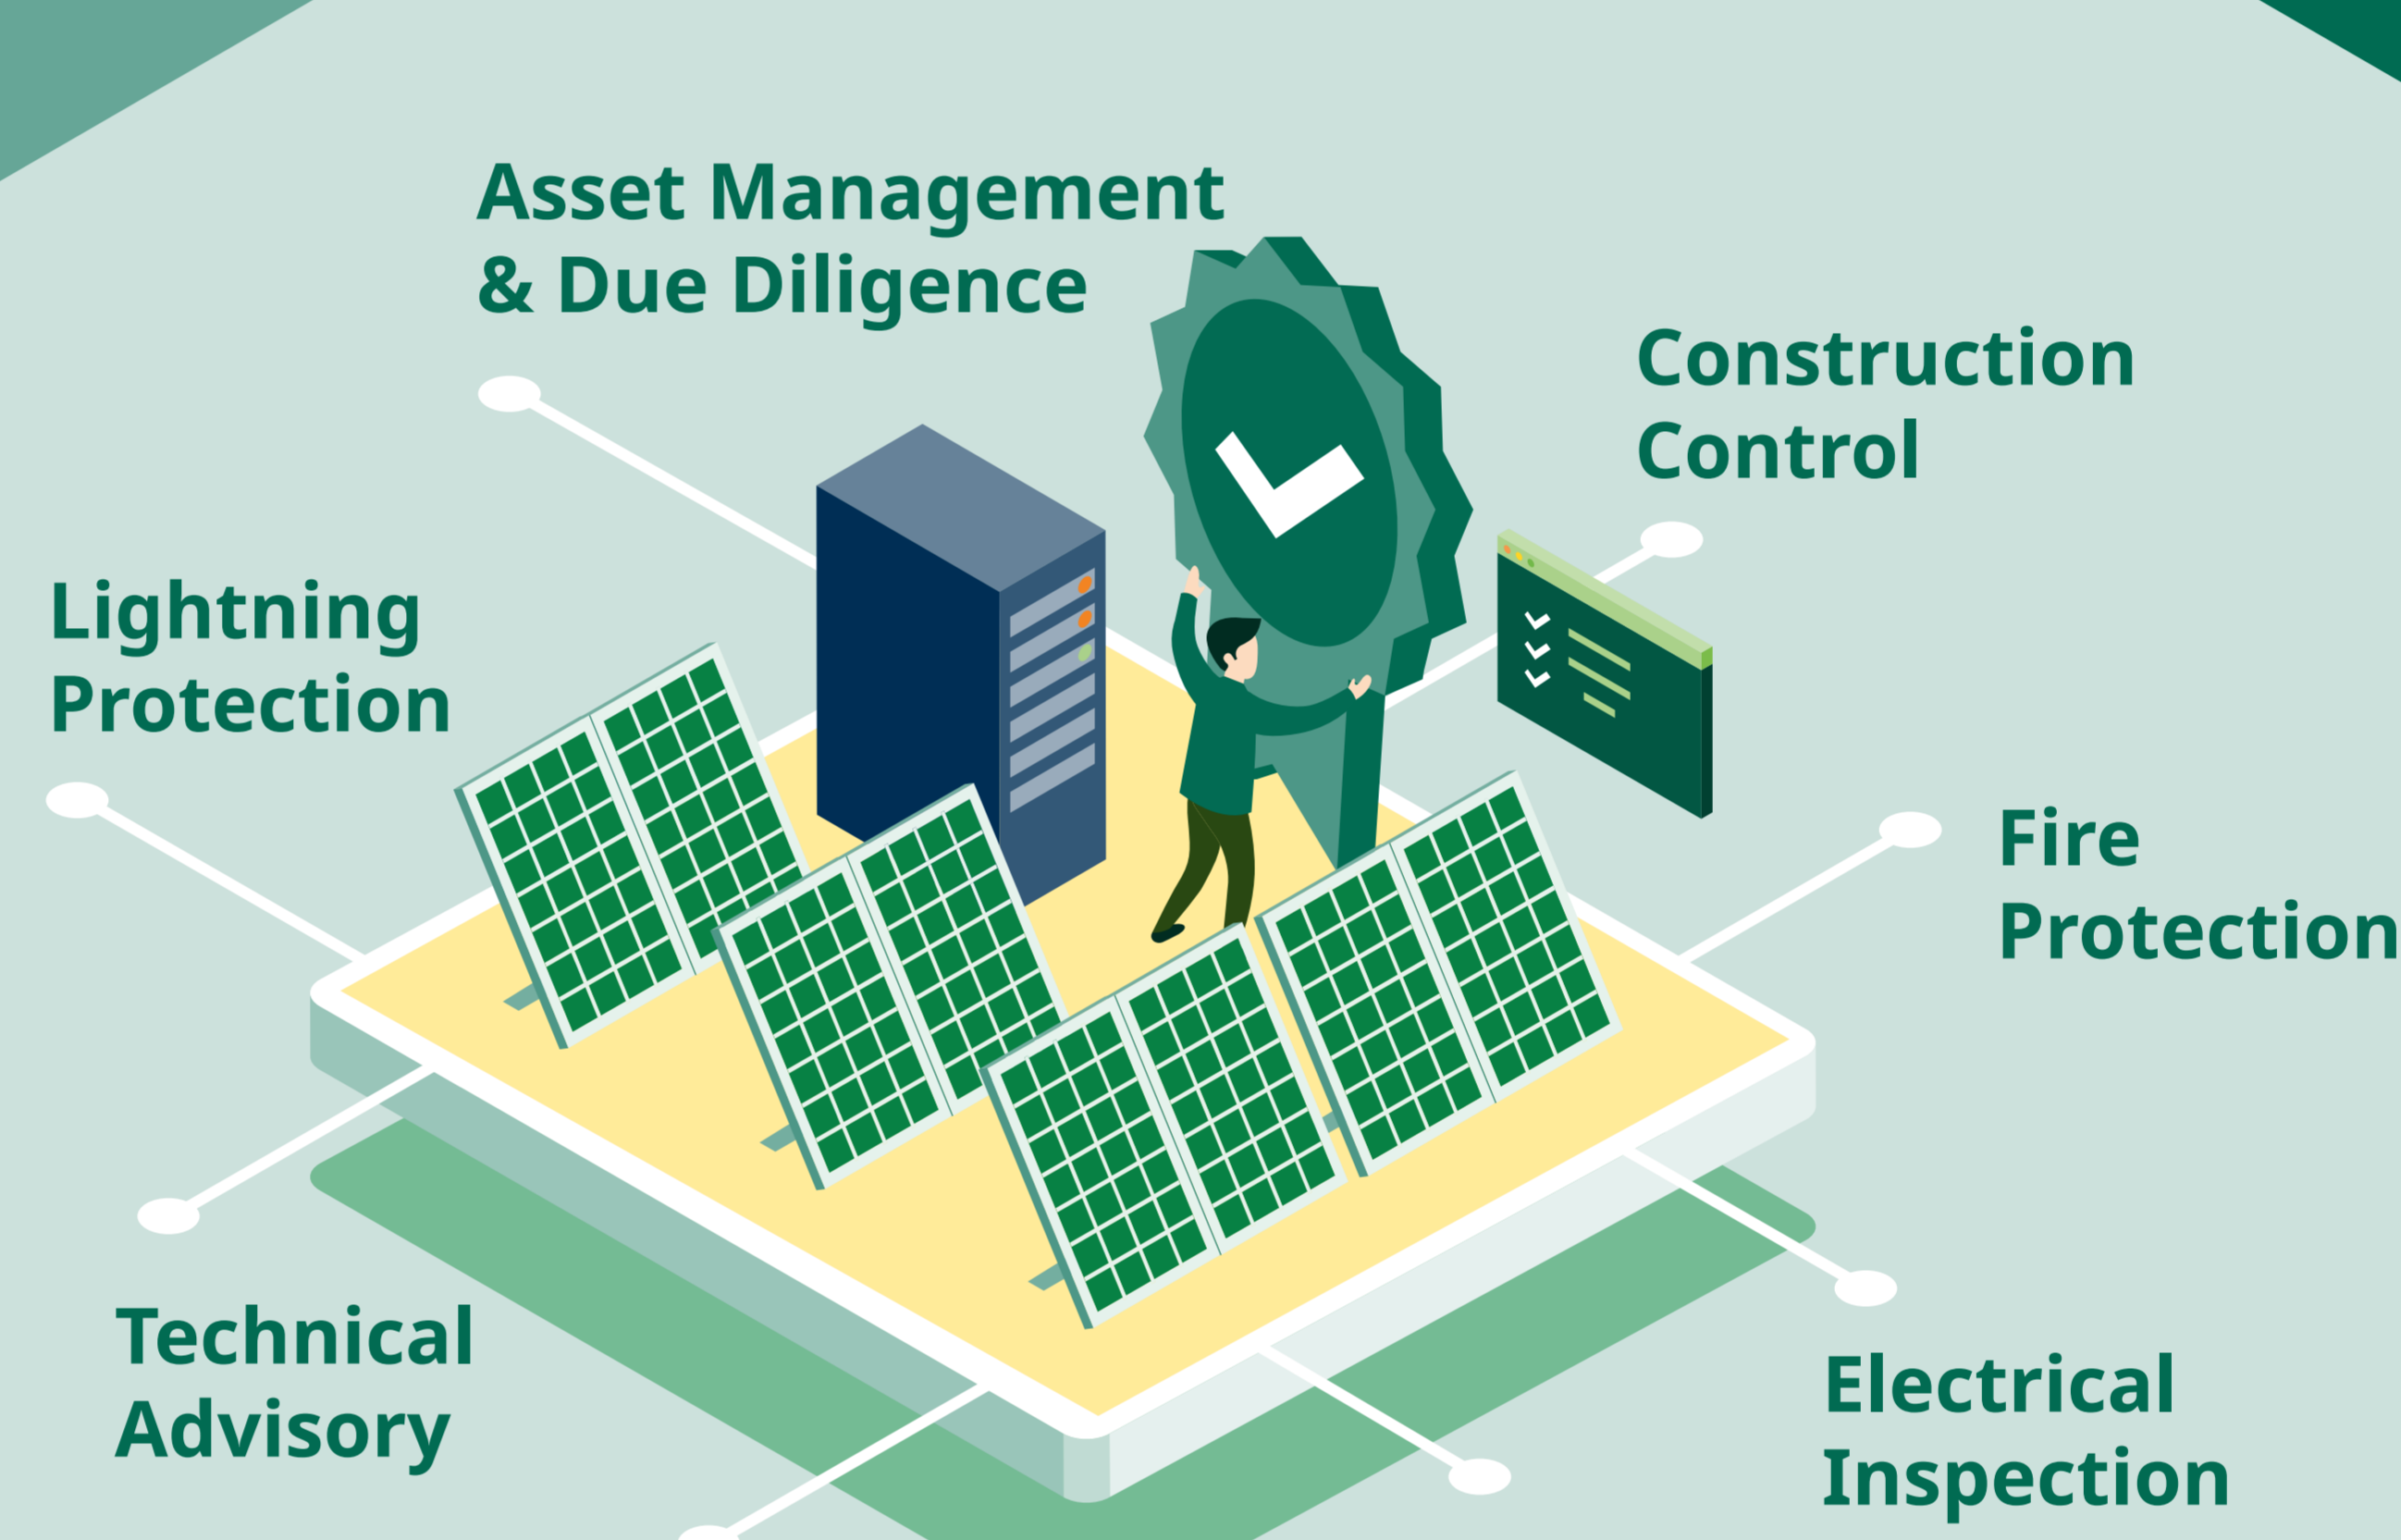

## 3 Procurement Manufacturing Construction

Efficient manufacturing and precise construction are essential for ensuring the quality, reliability, and performance of solar installations.

## 4 Commissioning

Commissioning ensures that solar systems meet performance, safety, and regulatory standards before going live.

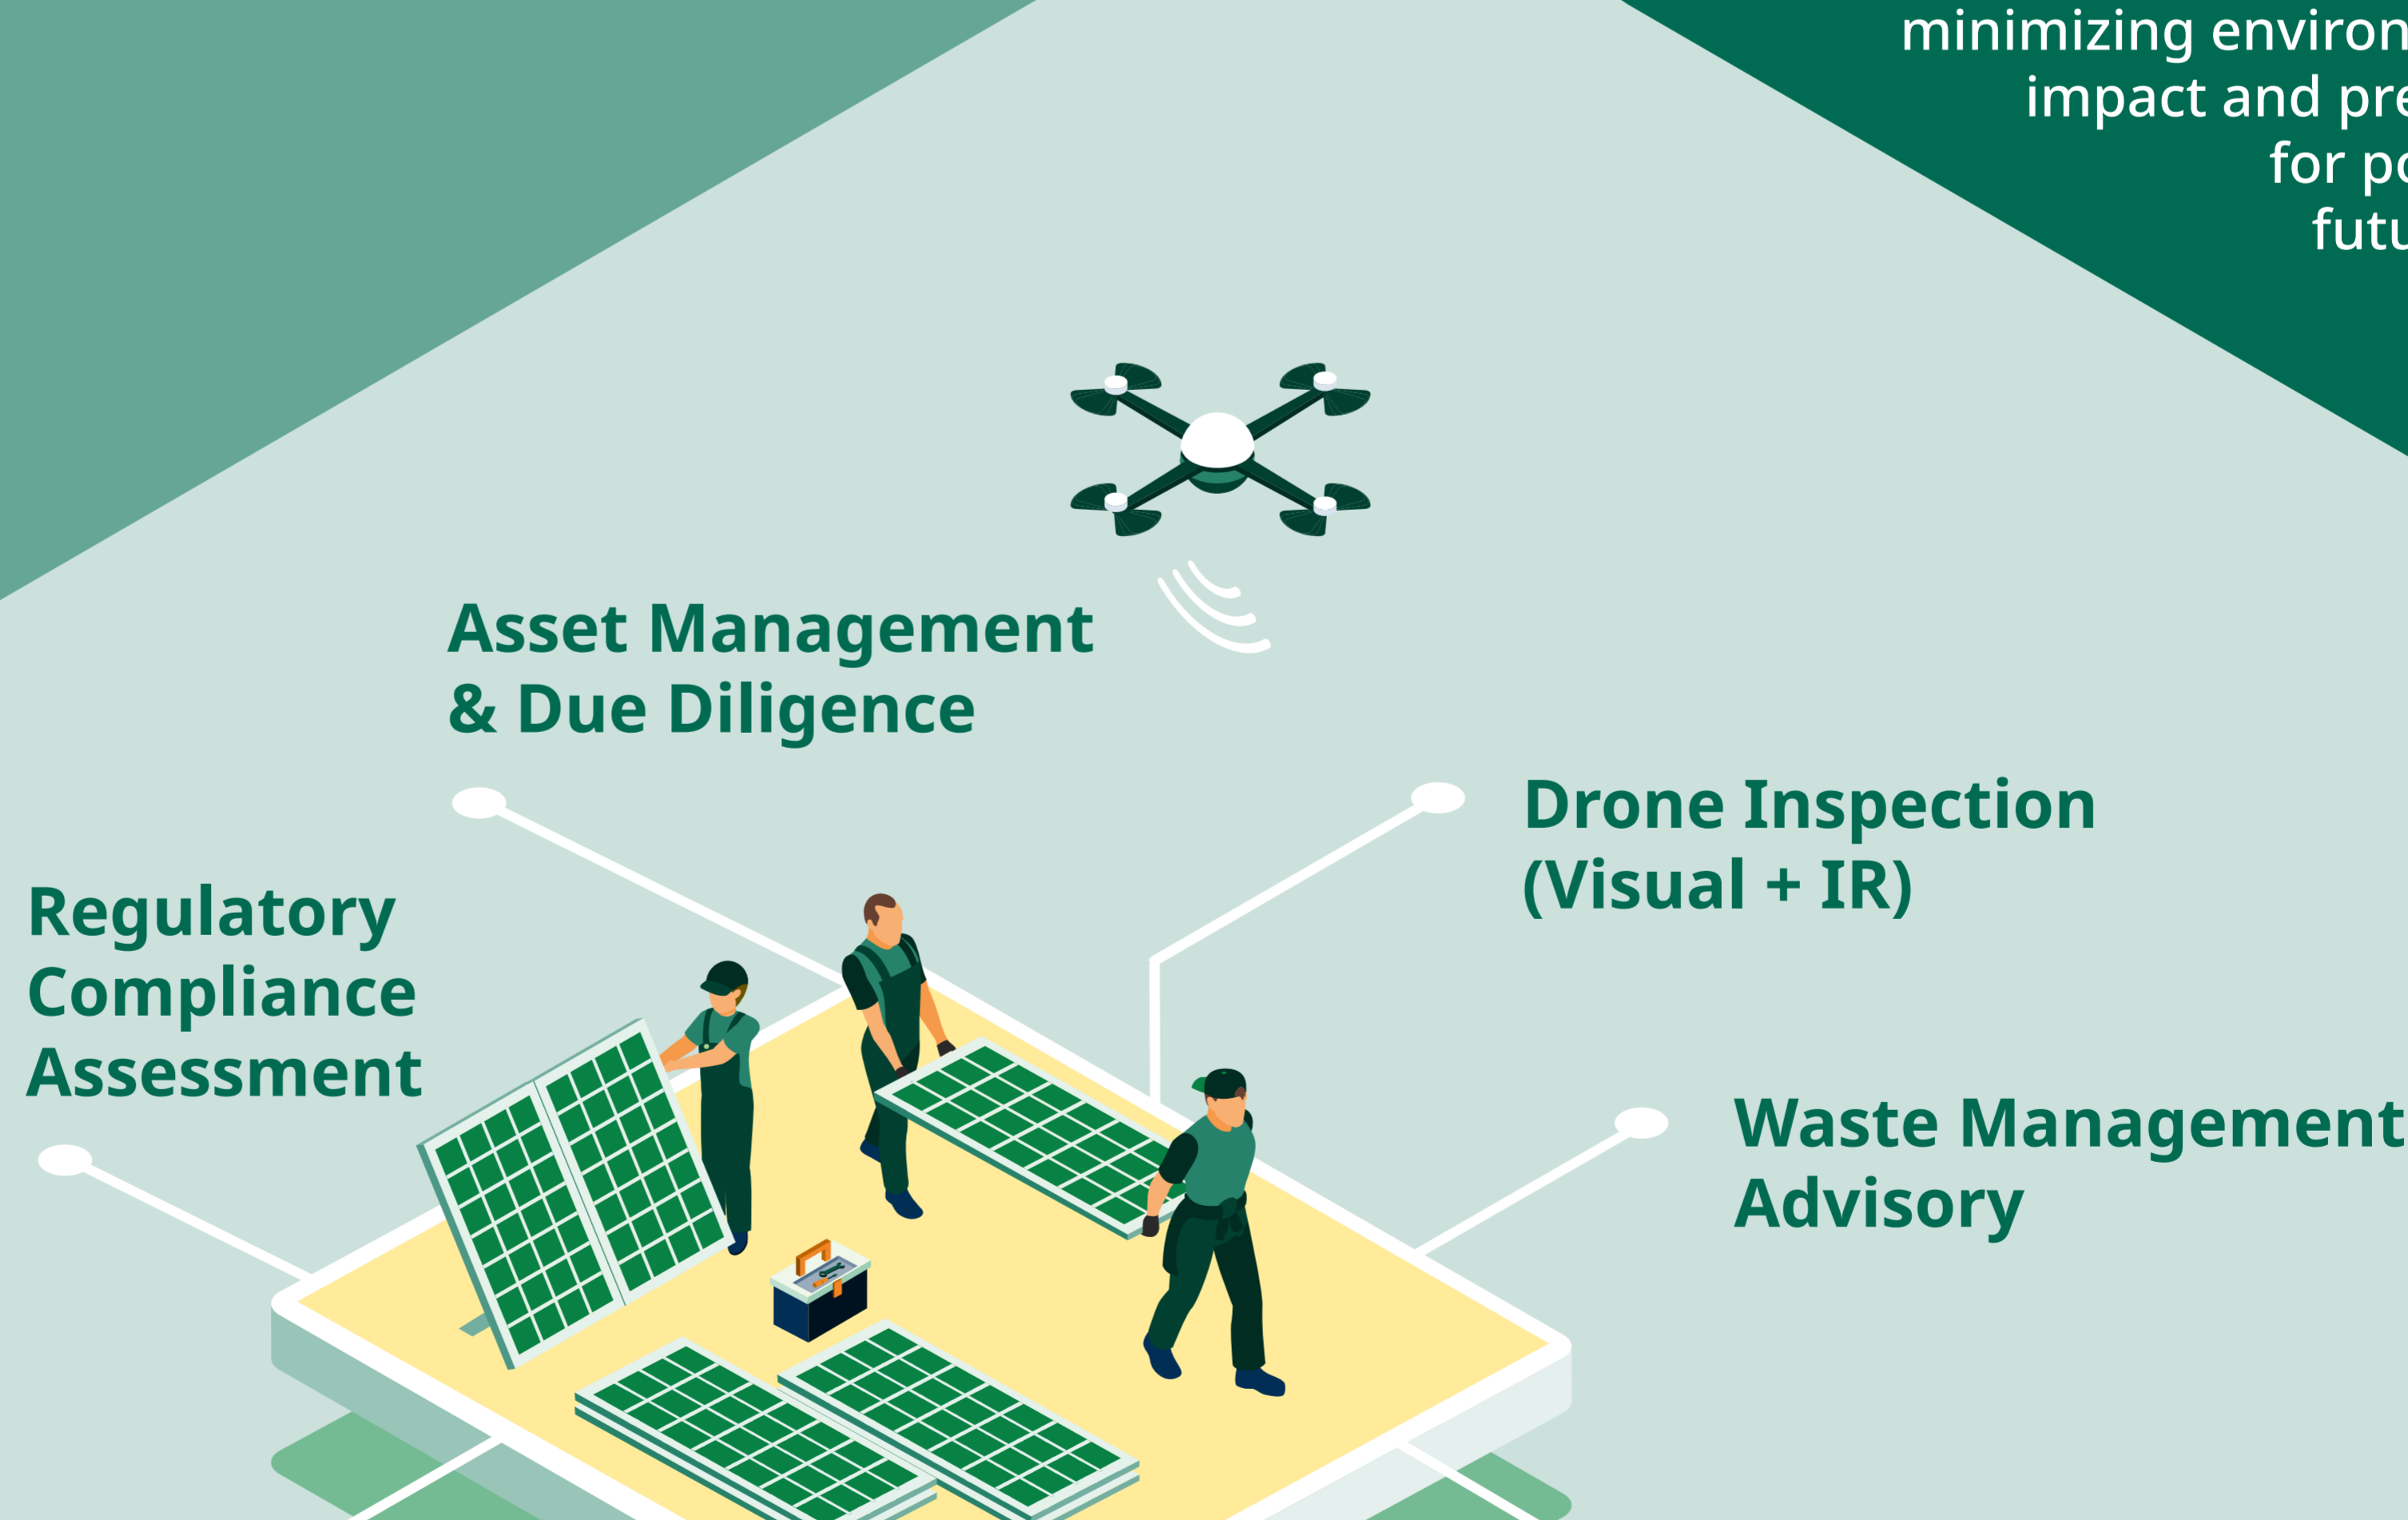

## 5 Operation

Running solar systems efficiently ensures that they perform optimally, minimizing downtime and maximizing energy output.

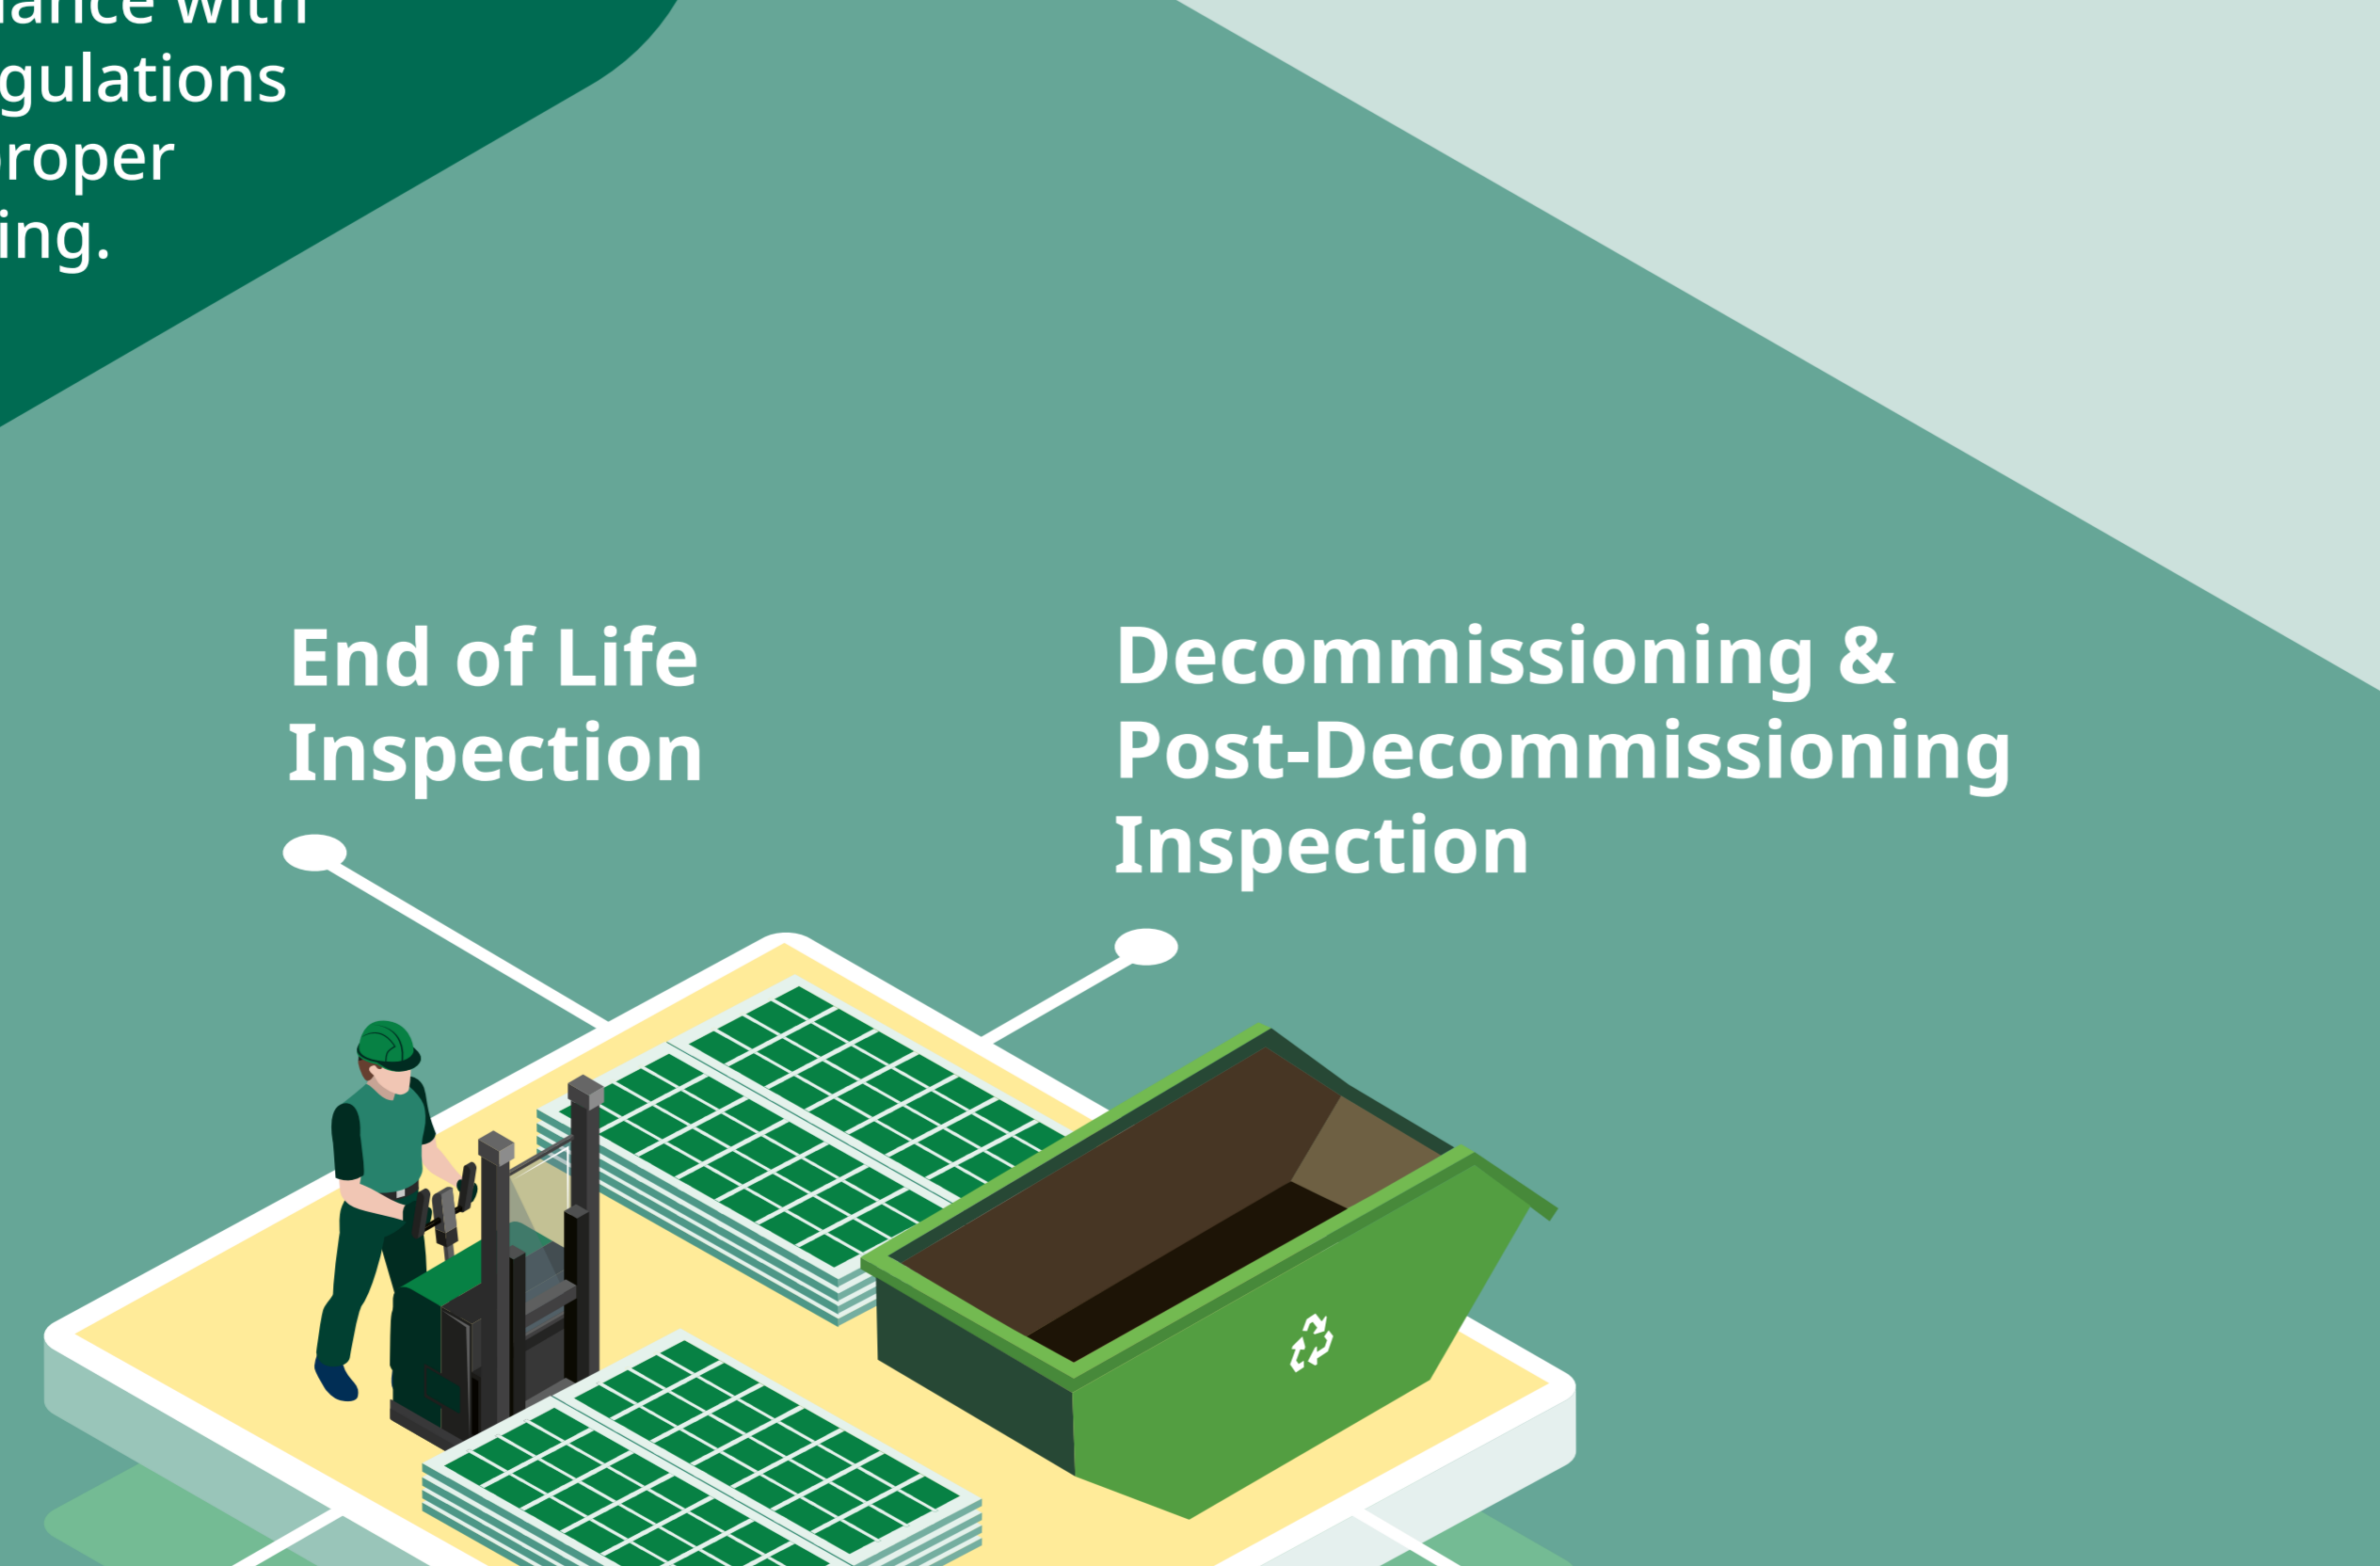

## 6 Decommissioning

Decommissioning ensures the safe, compliant and efficient removal of solar installations at the end of their lifecycle, minimizing environmental impact and preparing for potential future use.

## 7 End of Life

This stage ensures that solar systems are safely retired, with inspections and audits to confirm compliance with environmental regulations and prepare for proper disposal or recycling.

At DEKRA, we embrace change to ensure that solar installations remain safe and efficient throughout their lifecycle. With a deep understanding of the industry and a commitment to innovation, our solar energy services help you meet the challenges of this dynamic field.
