Labelling of Hazardous Materials

Preparation of Labels

Product Labelling and Safety Data Sheets

Our Services

The supplier of a hazardous substance or mixture must provide the recipient with a safety data sheet (SDS). This serves as a central means of communication for information on the hazardous substance throughout the production and supply chain. The format and content of the safety data sheet are specified by the EU REACH Regulation (Regulation (EC) No. 1907/2006). In addition to detailed information on the properties of the substance, the SDS also addresses the safe handling of the hazardous substance.

Your Benefits

The SDS must be written in the official language of the EU member state in which the product is placed on the market; it must also be updated regularly. The classification of the substance or mixture in question with regard to its hazardous properties is decisive for the content of the safety data sheet. Classification and labeling are based on the requirements and regulations of the CLP Regulation (Regulation (EC) No. 1272/2008), which establishes criteria for hazardous chemical substances and mixtures. This determines the content of the hazard labeling for the product label.

Our Range of Services

Preparation and review of Safety Data Sheets (SDS) for jurisdictions worldwide

We prepare, review, and update your safety data sheets in accordance with REACH and CLP, as well as for all relevant jurisdictions worldwide.

Classifications and Labels According to Hazardous Materials Regulations

Classifications and labels according to hazardous materials regulations (CLP), ADR, IMDG Code, IATA, AVV codes, and WGK.

Preparation of labels and packaging in line with your corporate identity

We create your layout in accordance with your corporate identity and handle all communications with service providers.

Product analysis in our laboratory

If physical and chemical properties are unknown, they can be determined in our laboratory, thereby enabling proper labeling of hazardous materials in accordance with the CLP Regulation.

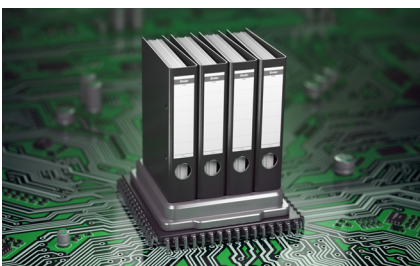

Conducting training sessions/workshops

Conducting training sessions and workshops on hazardous substance labeling and safety data sheets in accordance with the latest regulations and laws governing hazardous substances.

Product notifications to national authorities

We support you and your company in identifying and fulfilling notification requirements in the relevant jurisdictions worldwide.

Assistance with UFI generation and PCN notification

We assist you and your company with generating the UFI code and submitting the PCN notification in accordance with CLP Annex VIII.

Proper labeling of hazardous substances

Proper labeling of hazardous substances in accordance with the regulations in the relevant jurisdiction.

Your Benefits

- Receive the required documentation for hazardous materials
- Comply with legal regulations and requirements
- Build trust with customers and partners
- Enhance your reputation as a reliable supplier and thereby increase your market opportunities
- Project management handled by a service provider
- No need to deal with multiple points of contact
- We provide all services under one roof

DEKRA has been advising companies on chemical regulations for over 30 years

We offer a one-stop solution for all your needs, including consulting and testing services

We help you meet these requirements in a pragmatic and efficient manner

Design of labels and packaging

- We design your product in accordance with your corporate identity
- We handle all communications with service providers, whether they are printers, translation services, or other suppliers of hazardous materials
- Correct product labeling for different jurisdictions
- Preparation of print data
- Provision of data

Custom design of your product to match your corporate identity

Mandatory labeling with the "Unique Form Identifier" (UFI) since January 1, 2021

Labels corresponding to the legal jurisdiction

Proper labeling of waste disposal for the relevant jurisdiction

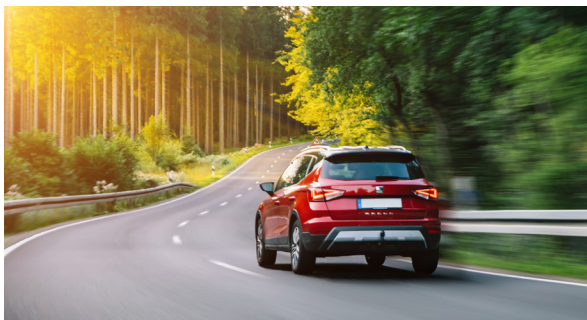

Proper labeling of hazardous substances on products in the relevant jurisdiction, as well as the preparation and review of safety instructions in accordance with REACH and CLP

Sectors

Many products contain substances you might not expect. That's why it's all the better to have a trusted partner by your side. Our team at DEKRA consists of experts in chemistry and hazardous substances. We're happy to advise you. Together with you, we'll find ways and solutions to label your product correctly.
