

The background of the slide is a photograph of a male mechanic with dark hair and a beard, wearing a green work jacket. He is standing in a workshop, looking up at the underside of a car that is elevated on a lift. The car's wheels and suspension are visible. A large green diagonal shape is overlaid on the left side of the image, containing the text.

VDA 6.2: proof of quality for the automotive industry

VDA 6.2 product sheet

With VDA 6.2 Certification, you, as a service provider in the automotive industry, document the quality, reliability and flexibility of your services to customers and partners.

The goal of VDA 6.2 certification

The VDA 6.2 standard of the German Association of the Automotive Industry (VDA) enables service providers in the automotive industry to document their high quality, reliability and flexibility to the rest of the world.

The requirements of the VDA Volume 6 Part 2 Standard, “QM System Audit Services” are aimed specifically at internal and external service companies in the automotive industry. These include, for example, car dealerships, garages, engineering firms and freight forwarders.

VDA 6.2 and ISO 9001

Certification of the quality of service providers in the automotive industry in accordance with VDA 6.2 largely complies with ISO 9001. Separate certification according to the internationally recognized quality standard is not therefore necessary. Upon request, we can also issue you a separate ISO 9001 certificate after your successful VDA 6.2 certification.

The benefits of our certification

With our VDA 6.2 certification, you get the best proof of the performance of your services. With our recognized test seal, you are also able to prove that your processes and products fulfill the high quality requirements.

In this way, you strengthen both the trust of your customers and business partners as well as your competitiveness on the market.

Successful VDA 6.2 certification in just a few steps

The certification by our experts takes place in the following steps:

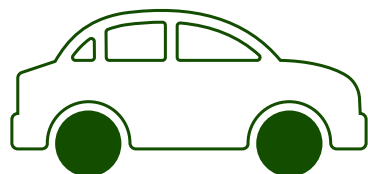

- 1. Information meeting**
Clarification of outstanding issues, joint determination of the next steps, project discussion
- 2. Document verification and on-site audit**
Documentation audit and verification of the practical application of the quality management system
- 3. Audit report and assessment**
Visitation report and assessment of the management system
- 4. Certification and DEKRA seal**
Issuing of your certificate and our recognized seal of approval (with a maximum validity period of three years)
- 5. Annual surveillance audit**
A surveillance audit takes place every 12 months
- 6. Recertification**
Steps 2 to 6 are repeated in the recertification audit before the expiry of three years

Are you interested in certification according to VDA 6.2?
