

The background of the slide is a photograph of an aircraft assembly line. Two workers in blue uniforms are visible, one standing on a platform and another on the ground, working on the fuselage of a large white aircraft. The aircraft's metallic surface is highly reflective. A green diagonal shape is overlaid on the left side of the image, containing the text.

Quality management – aviation EN 9100

EN 9100 product sheet

As a company in the aerospace industry, you have to fulfill particularly exacting requirements regarding the quality and documentation of your processes. With DEKRA certification according to the EN 9100 standard, you unambiguously prove your performance capability to your customers and business partners. You also gain indispensable access to the global market at the same time.

What DIN ISO 9100 stands for

The EN 9100-Series of standards was developed by the International Aerospace Quality Group (IAQG) on the basis of ISO 9001. It is used by all the leading companies in the aerospace industry worldwide as a quality standard for their suppliers. EN 9100 is identical in its contents to the American AS 9100 standard and the Asian JISQ 9100 standard.

The objective of this international standard is to ensure maximum efficiency and reliability for processes within the supply chain and to thereby prevent risks.

Accordingly, the series of standards includes not only a set of rules for design, development, production, and assembly (EN 9100), but also for maintenance organizations (EN 9110) and distribution and warehousing (EN 9120).

What DEKRA offers

Consistent **quality management according to EN 9100** helps you to sustainably improve your processes, reduce your costs and weak points, and increase your competitiveness. Certification by DEKRA offers you further benefits:

- ▶ Access to global markets: recognition by all the relevant market participants
- ▶ Registration as a supplier with access rights to the OASIS (Online Aerospace Supplier Information System) database, which is available worldwide
- ▶ Active risk management: reduction of warranty risks
- ▶ Straightforward integration with other management systems
- ▶ Taking your individual place into account

Steps for your successful certification

1. Information meeting
2. On-site audit including documents review
3. Audit report
4. Certificate and DEKRA seal
5. Annual surveillance

Are you interested getting your organisation certified according to EN 9100? Our experts will be happy to inform you on the procedure in a personal meeting. Contact us!
