

The background image shows a man with glasses, wearing a white lab coat over a green sweater and a light-colored shirt, working in a warehouse. He is focused on a piece of black equipment with a screen and buttons. The warehouse has high shelves filled with boxes, and the lighting is bright. A large green diagonal shape is overlaid on the bottom left of the image.

Guaranteed quality in pharmaceuticals distribution

GDP product sheet

Manufacturers of pharmaceutical products are required to demonstrate transparency and full traceability throughout the supply chain. The good distribution practice (GDP) guidelines support pharmaceutical companies with this task and provide a uniform standard for the assessment of quality at the same time. Prove the assured quality in your company with GDP certification.

Objective of GDP certification

The “Good Distribution Practice of Medicinal Products for Human Use” (GDP) contains guidelines for the correct and, above all else, safe handling of medicinal products. Such guidelines were published for the first time in 1994 and have been continuously adapted to the medical, technical and economic changes and developments ever since. The GDPs published by the European Commission entered into effect in 2013.

The guidelines have two main objectives: On the one hand, they are designed to prevent falsified medicines from entering legal supply chains and, on the other hand, they are designed to ensure the associated control of the distribution chain and to maintain the quality of medicinal products.

Contents of the GDP guidelines

The GDP guidelines cover various areas of the pharmaceutical value chain. This helps ensure a comprehensive and holistic quality of the pharmaceutical products. Among others, the guidelines contain the following chapters: quality management, personnel, operations, complaints, recalls of medicinal products, outsourced activities, self-inspections and special provisions for brokers.

GDP certification in just a few steps

1. Project Meeting
2. On-site GDP audit and documents review
3. Audit report and assessment
4. Certificate and seal
5. Surveillance audit
6. Recertification
