

The background of the entire slide is a photograph of a landscape with several high-voltage power line towers and their associated cables stretching across the horizon under a hazy sky. The foreground is filled with low-lying vegetation.

Certification of your energy management system according to DIN ES ISO 50001

ISO 50001 **product sheet**

Since energy consumption is becoming an increasingly important cost factor in companies and organizations, the continuous optimization of energy use with an energy management system (EnMS) according to DIN EN ISO 50001 is by now indispensable. An energy management system is designed to assess the use of energy by the company so as to continuously improve its energy efficiency in accordance with legal requirements.

DIN EN ISO 50001 in brief

The standard describes the requirements regarding an energy management system that enables companies to improve their energy performance on a systematic and continuous basis - taking the legal framework into consideration.

ISO 50001 is essentially based on the environmental management system standard ISO 14001, and due to its joint high level structure (HLS), can be very easily integrated in it. A joint introduction of the two systems is therefore very useful and recommended.

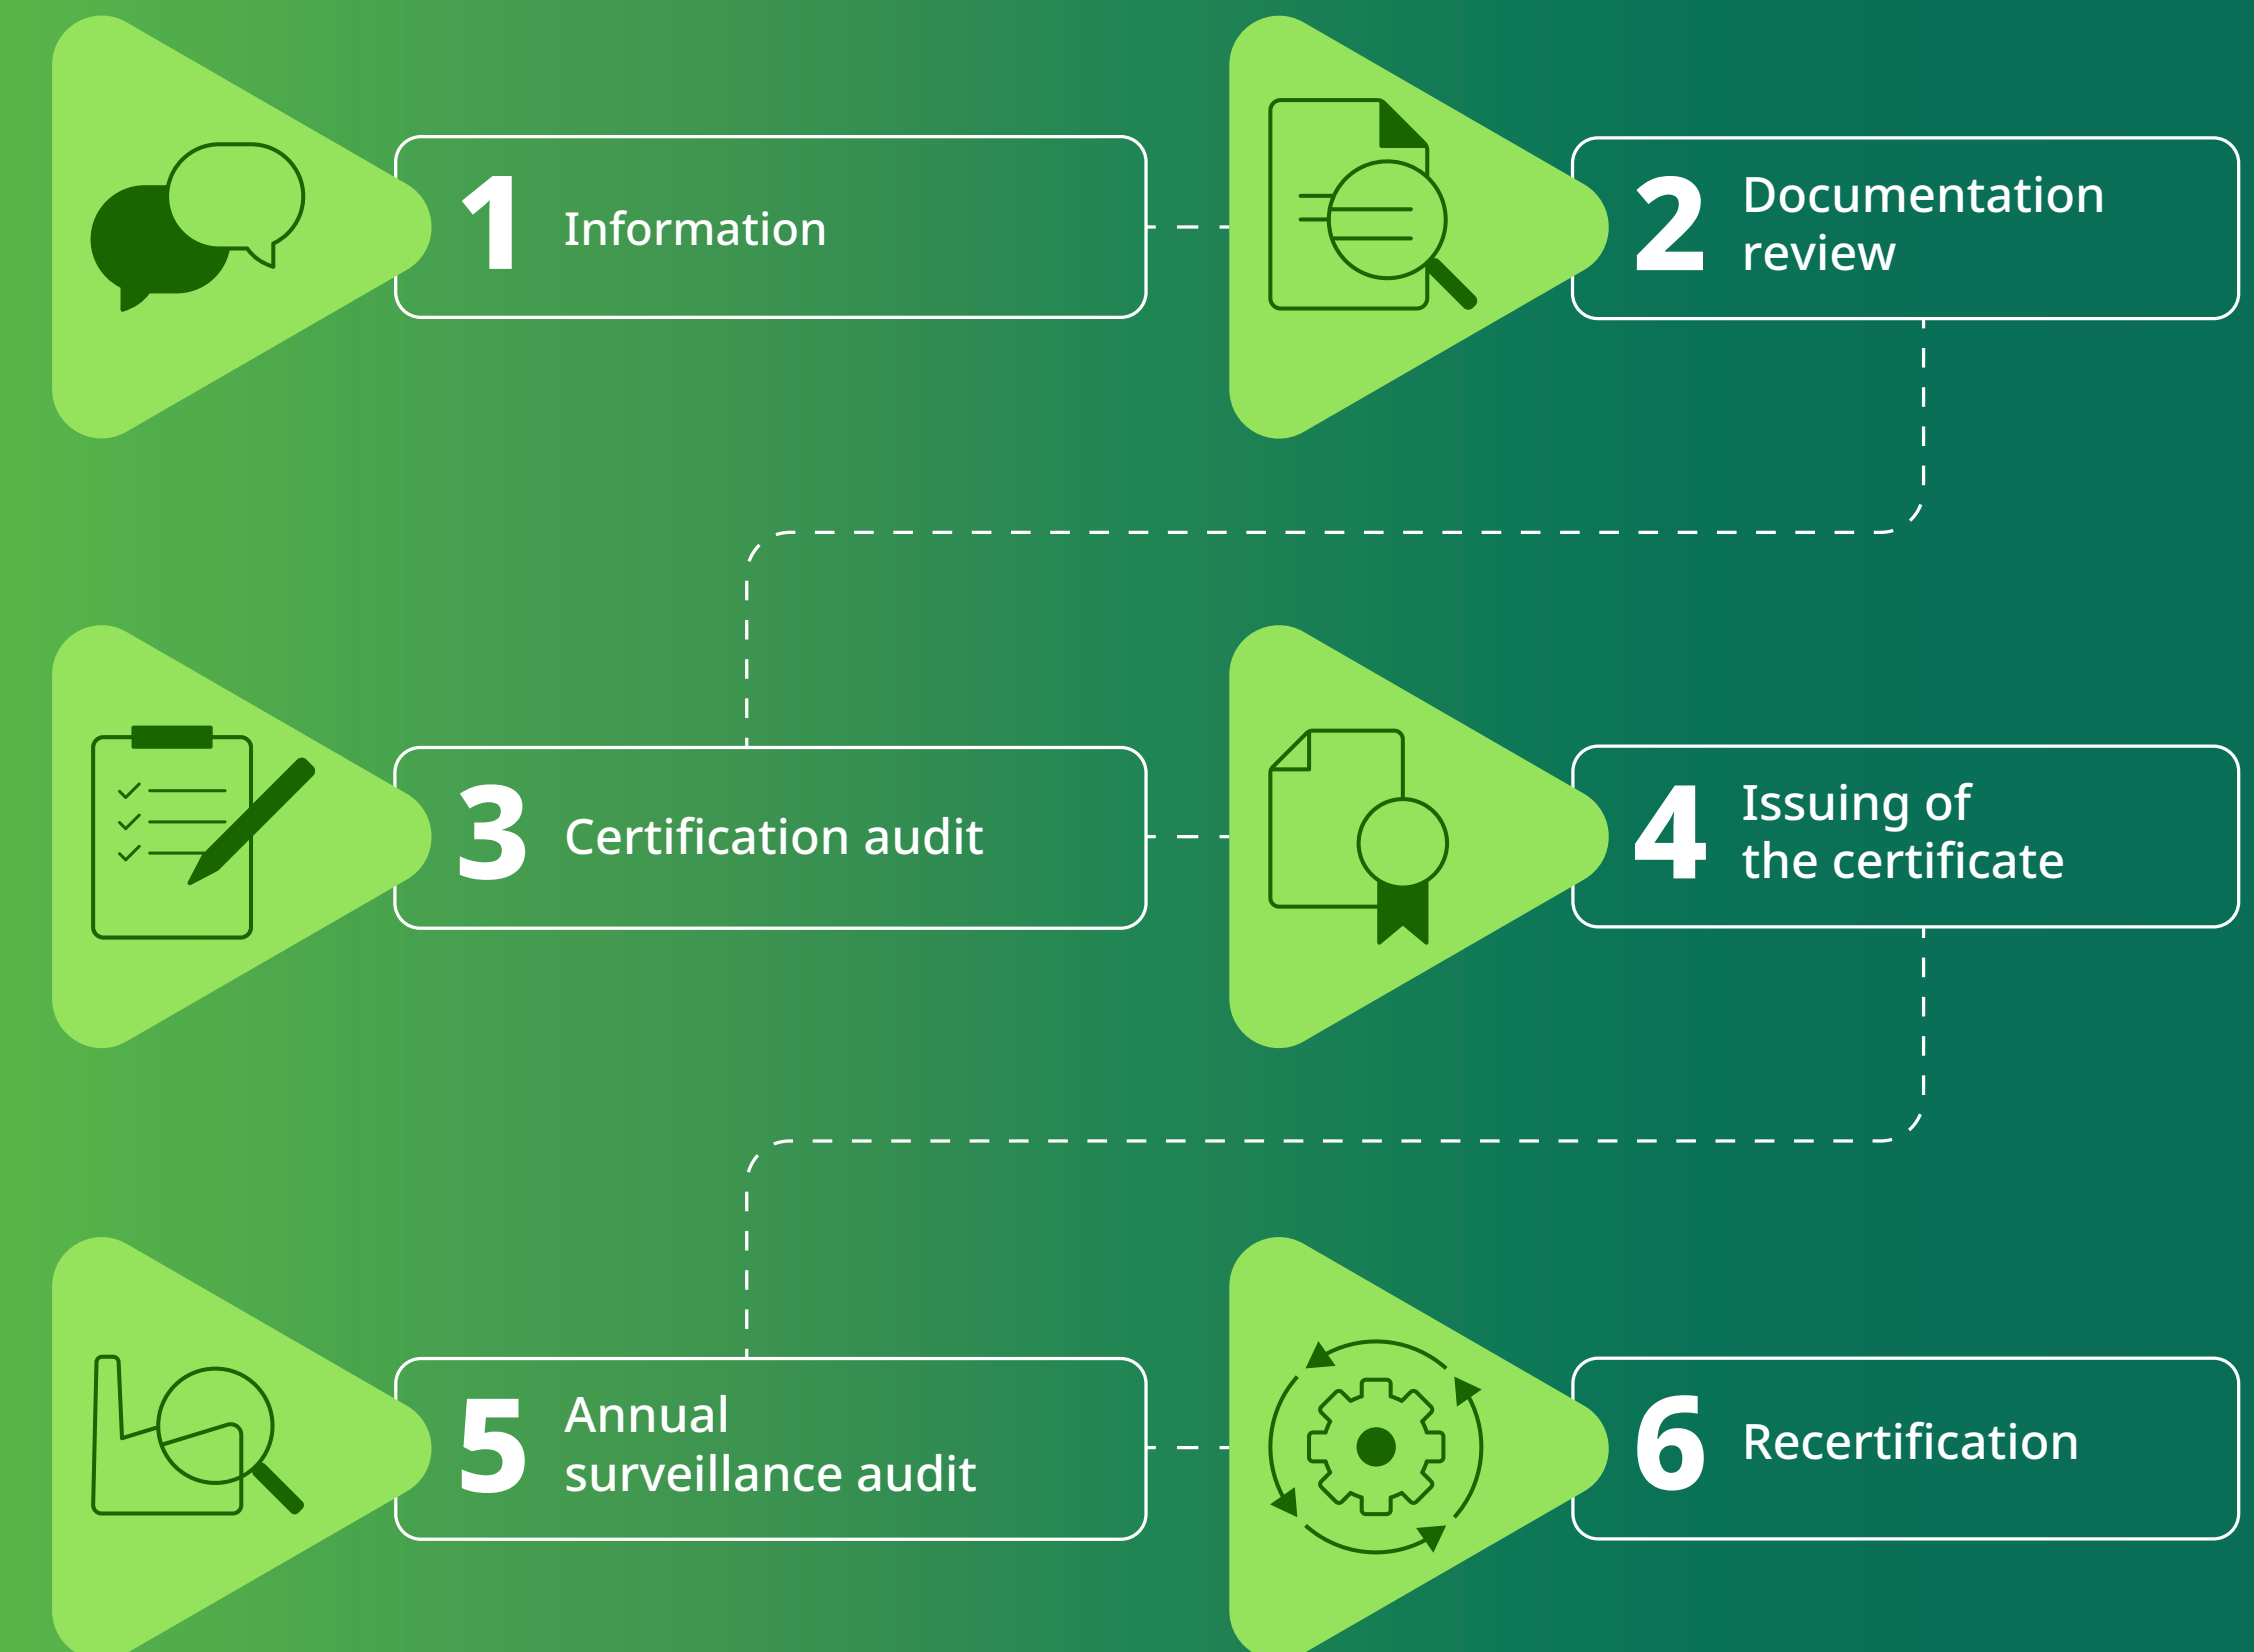

Benefits of certification according to ISO 50001

- ▶ Long-term reduction of CO₂ emissions in accordance with EU climate policy
- ▶ Competitive advantages by demonstrating ISO 50001 certification
- ▶ Continuous improvement of energy efficiency
- ▶ Cost savings due to efficient energy management
- ▶ Systematically ensuring compliance with the current laws and regulations applicable to the company's energy use
