

Indonesia – Clarification of Product Categories Requiring Telecommunication Certification

The Indonesian Directorate General of Digital Infrastructure (DJID) under the Ministry of Communication officially implemented **Ministerial Decree No. 469/2025** on November 7, 2025, which clearly defines the product categories that are required to obtain telecommunication certification.

This regulation provides final guidance for manufacturers and importers to avoid customs clearance delays or potential penalties. The decree comes into effect 30 days after its issuance in November.

Devices utilizing Wi-Fi, Bluetooth, NFC, Cellular (LTE/5G), or any radio frequency technology must comply with this regulation. The applicable product categories include, but are not limited to:

1. **Computing and personal devices:** laptops, tablets, smartphones, and smartwatches.
2. **Infrastructure and networking equipment:** routers, switches, modems, base stations (BTS), and fiber optic equipment (ONU/ONT).
3. **Wireless modules and IoT devices:** RFID devices, GPS trackers, and low-power wireless modules.
4. **Broadcasting and RF equipment:** two-way radios, radar systems, and set-top boxes.
5. **Smart connected products:** any devices with integrated wireless functionality, including smart home appliances and in-vehicle infotainment systems.

If a product includes wireless or telecommunication functionality, certification is **mandatory**, even if the product is not listed in the appendix or if the wireless function is only secondary.

Conversely, if a device is listed but does **not** include any wireless functionality, it may be exempt from certification.

Note: Please refer to the appendix *“Indonesia Telecommunication Certification Product Categories.xlsx”* for the complete product list.
