QUESTIONS TO ASK AND ANSWER TO GET SAFETY RIGHT

What are we really trying to achieve?

Genuine safety improvement isn't limited to just one aspect—it aims for excellence by integrating all elements of EHS, fostering a culture that truly cares for people.

What are the obstacles in the way of hitting our targets?

When considering safety targets or any other objectives, various organisational elements and factors can potentially hinder or block progress toward success.

What does a good strategy look like?

A strong strategy is shaped by a cross-functional team of operational, non-operational, and safety professionals, who align around a shared vision of the desired future state to guide their strategic direction.

Once we have a strategy, how will we execute it?

Once the strategy is set, executing it means approaching safety improvement as a change management process that integrates into daily operations.

Who owns the strategy?

What distinguishes a strategic approach to safety from a more tactical one is the leaders' actions. What leaders do—how they act and what they say—will either result in lasting change or a wave of activity that fades without making a real impact.
