

# Five Ways to Prevent Catastrophic Incidents

Catastrophic Incidents usually occur after early warning signals are overlooked.

## 1 Anticipation

Recognise the early warning signs that help head off incidents.

## 2 Questioning

Protect team decisions from their natural biases, so they rely on data rather than intuition.

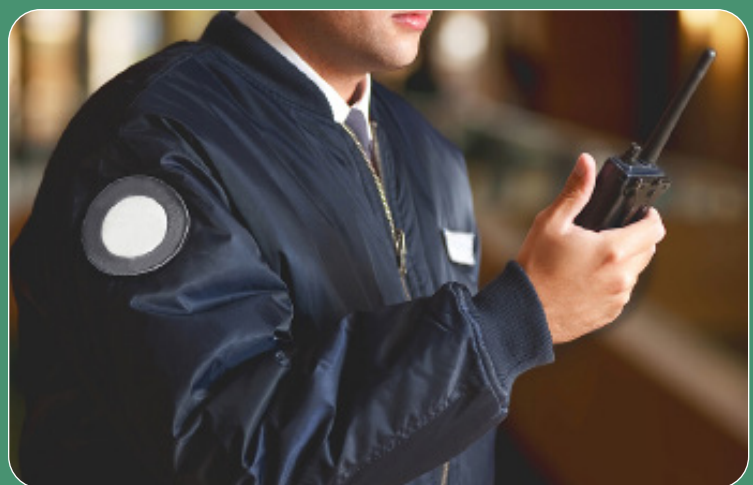

## 3 Diligence

Assure consistent and reliable use of safety programs and processes.

## 4 Resilience

Develop the agility to recognise and quickly respond to exposures in real time.

## 5 Learning

Make learning routine rather than waiting for an incident to trigger learning mode.

Top-tier companies will evolve where key leaders rise to the challenge to adopt High Reliability Organisation principles.
