The Benefits of Using an Integrated **Safety Management System**

#1
Centralized location for all information

Remove the barrier of information silos by keeping all safety data for all locations in one centralized system.

Optimizes:

- Accessibility to all info across all locations
- Time efficiency when entering and retrieving data
- Corporate wide continuity with safety programs

Incident Reporting

Auditing

Corrective Actions

BBS Observations

Driver Files

Training Documentation

Document Management

#2
Data Analysis

An integrated SMS streamlines your data use process. With the the ability to cross-reference data from different locations and data pools and leverage real-time reporting functions, you'll spend less time gathering data and more time analyzing it - creating information that makes your workplace safer.

#3
Continuous Improvement

Integrated applications allow you to track, trend, and act upon findings within your safety programs. Real-time reporting and corrective actions and alerts allow you to create, delegate, and measure precise improvements.

#4
Efficiency

An integrated SMS streamlines a number of critical processes, including data collection, and data retrieval and analysis – giving your team more time and bandwidth to spend on creating a safe environment.
