

Information Security Management ISO 27001

It is unconceivable today that an organization could survive in the fast-paced and competitive global market without implementing information technology to quickly and accurately process and share data needed to complete business transactions. Protecting the security of information critical to your business success is therefore paramount and prerequisite. Corporate leaders and information security professionals must adopt and apply appropriate measures to effectively identify, analyze, and manage risk to individual industries and companies. Prove your commitment to the highest of security standards with the internationally recognized DEKRA certification and distinguished test mark seal and boost trust among your employees, customers, and business partners.

This is what ISO 27001 stands for

The ISO 27001 standard pursues the structured implementation of all essential security aspects to provide a system ensuring more procedural security and reducing potential legal liability. An information security management system (ISMS) according to ISO 27001 is based on the PDCA control loop (Plan-Do-Check-Act) procedure established in ISO 9001 in order to simplify holistic information security management. Suitable for any industry or organization, spe-

cial requirements may exist with regard to the availability, confidentiality, and integrity of your information and data. DEKRA **certification in accordance with ISO 27001** proves that you can recognize, evaluate, and consistently eliminate your business risks at an early stage.

What DEKRA offers you

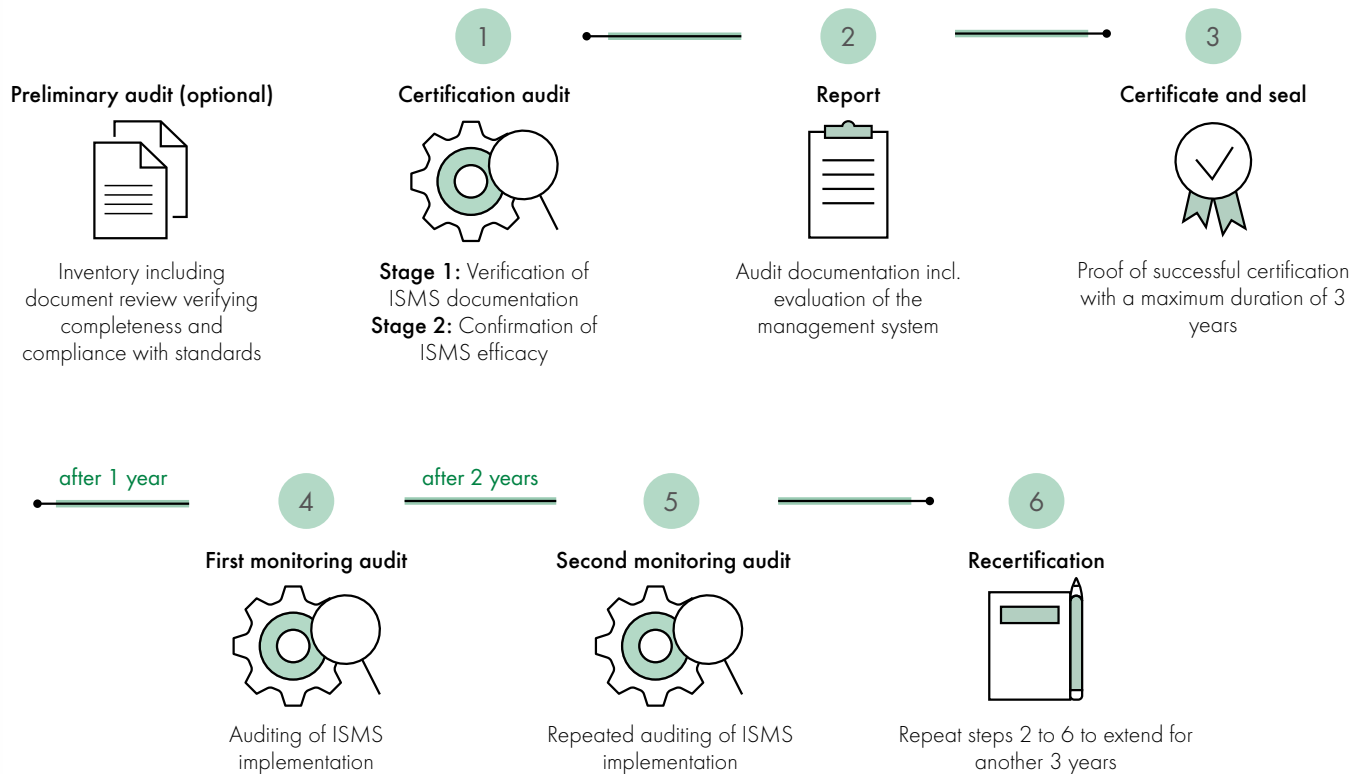

Technical know-how and many years of experience with process-oriented management systems make us your perfect

partner for ISMS certification. Our DEKRA experts help you ensure information security is an integral part of your organizational procedure. Take advantage of the benefits:

- **Protect against malfunctions, errors, espionage, and abuse as well as their associated costs in times of increasing globalization and extensive networking**
- **Ensure your business operations through the availability of your IT systems and processes**
- **Raise risk awareness**
- **Maintain a high compatibility with other management standards such as ISO 9001 and ISO 14001**

We provide uncomplicated practical support and answer your questions throughout the certification process. Our neutral and independent analysis and advice ensure your individual goals are successfully met.

ISO 27001 certification process
