

Hazardous Material Classification Triggers

New Materials

Existing Material with Limited Documentation

Incident, Audit or Inspection Raises Questions

If you find yourself facing one of these hazardous material classification triggers, take the following steps to ensure compliance, as well as to protect people, facilities and the environment:

1

Identify appropriate testing to characterize hazards of the material.

2

Conduct testing to determine the appropriate hazardous material classification for transportation.

3

Update documentation, training and procedures based on test results.

Need help testing and accurately classifying dangerous materials for transportation? DEKRA can help.
